SUMMARY

Backend Engineer with 4+ years of experience architecting high availability systems and leading distributed engineering teams. With a proven track record of engineering scalable platforms from the ground up, including complex emergency response systems and secure fintech applications.

WORK EXPERIENCE

Alerte Universal - Safety & Emergency Response Platform Oct 2024 – Aug 2026 | Global (Remote)
Lead Backend Developer

- Architected the complete backend infrastructure for an emergency response platform from scratch, successfully leading the system to its full App Distribution approval.
- Engineered a real-time geospatial engine utilising bounding-box queries to trigger instant push notifications for high-risk zones.
- Developed family safety modules featuring real-time group tracking and optimised 24-hour historical location logging.
- Integrated advanced artificial intelligence to build a context-aware safety assistant, secured by custom subscription-based access decorators and automated payment processing.

Agoldresourcing Apr 2025 – Jul 2026
Lead Backend Engineer United Kingdom (Remote)

- Engineered the ECS Time Spine, deploying a highly available canonical time reconciliation engine on cloud infrastructure.
- Designed and implemented live telemetry to monitor system health and data ingestion pipelines in real-time.
- Authored comprehensive API documentation with clean, interactive interfaces, ensuring seamless internal and external developer integration.

VitalinkPlus - Smart Health Assistant Sep 2025 – Mar 2026
Fractional Backend Engineer - Contract United Kingdom(Remote)

- Directed a distributed team of 3 engineers to architect a high-availability backend ecosystem, ensuring seamless 24/7 connectivity between seniors and caregivers across the UK.
- Developed high-frequency data pipelines for biometric telemetry using optimised time-series database indexing.
- Implemented comprehensive security protocols including token-based authentication, password hashing, OAuth integrations, and multi-factor verification flows.
- Engineered a dual-channel notification system for push alerts and critical health event communications.

Cashom - Social Payment System Oct 2025 – Dec 2025 | Global (Remote)
Backend Engineer - Part-time Contract

- Engineered a secure fintech backend facilitating digital wallets, peer-to-peer transfers, and stringent user authentication.
- Developed a proprietary social payment system featuring a secure escrow mechanism to handle transfers to unregistered users.
- Integrated third-party payment gateways for live processing alongside real-time push notifications for transaction updates.
- Deployed a production-ready RESTful architecture incorporating rate limiting, asynchronous task processing, and secure administrator management tools

Help Experience (HEx) Oct 2022 – Dec 2023
Backend Developer

- Designed and deployed optimised APIs to streamline data extraction from relational databases, reducing response times by 30% and enhancing overall system performance.
- Automated the processing of large datasets, facilitating seamless real-time updates and improving data reliability by 25%.
- Spearheaded the integration of modular backend components, scaling the architecture to support high concurrent user traffic.
- Revamped the minimum viable product (MVP) architecture, aligning backend functionality with user needs to increase platform engagement by 20%.

PERSONAL PROJECTS

Easy Transact
Developed a secure, AI-integrated platform for financial management.
- Architected a secure, AI-integrated platform focusing on complex financial data analysis and user-centric workflows.
- Engineered robust authentication and automated communication systems, strictly adhering to data privacy and compliance standards.

STMA
Streamlined student data management through a Flask-based RESTful API.
- Designed and deployed a RESTful architecture to streamline the management of extensive student records.
- Implemented secure, token-based authorisation protocols, significantly enhancing overall data integrity and system security.

RedRoute
Optimized data storage and retrieval systems for URL shortening and QR code generation.
- Optimised data storage and retrieval systems to support rapid URL shortening and dynamic QR code generation.
- Integrated advanced caching layers, improving data processing speeds by 37% and ensuring highly reliable communication protocols.

TECHNICAL SKILLS AND SYSTEMS EXPERTISE

Programming Languages: Rust, Python, Golang, Javascript

Databases: PostgreSQL, MySQL, MongoDB, SQLite

Development Expertise: REST APIs, JSON-RPC, API design, data ingestion, data processing, pipeline architecture, web development and Artificial Intelligence (AI)

Infrastructure and Devops: Docker, AWS, Google Cloud, Render, GitHub Actions, CI/CD pipelines, GitOps workflows, monitoring and observability

EDUCATION

University of Lagos 2025
B.A.Ed. in Guidance and Counselling

ALX Africa 2024
AI Augmented Professional Development Skills

ALX Africa 2023
Diploma in Software Engineering

Altschool Africa 2022
Diploma in Backend Engineering

ORGANISATIONS

Flaskcon Africa 2024 – Present
- Hosted panel session that featured 4 panelists in different tech spaces

Google Developer Group Lagos 2022 – Present

Educational Foundations Student Association (EFSA) 2024 – 2025
General Secretary
